

Graduation Vault — Operator Quickstart (Base Template v1)

Operator Scope

- Operators configure SAFE + Zodiac according to this template
- Operators do not hold keys, approve transactions, or manage funds
- Operators must not deviate from this template without signer approval

Overview

This Operator Quickstart provides a standardized, repeatable process for deploying a Graduation Vault using SAFE smart accounts and Zodiac governance modules. It is designed for schools, trustees, and authorized operators executing an approved deployment — not for custodians, asset managers, or advisors.

Preconditions (Before You Begin)

- Correct network selected in Safe
- Four verified signer addresses (Parent, School, Staff, Trustee)
- Graduation target year/date documented
- Decision confirmed: Graduation payout to Student + Parent joint SAFE

Deployment Summary

- Create Graduation Vault Safe (3-of-4)
- Install Zodiac Roles Modifier
- Install and configure Transaction Guard
- Lock configuration prior to graduation
- Create Graduation Destination Safe (Student + Parent)
- Execute graduation withdrawal via governed proposal

Non-Custodial Assertion

At no point does SD Advisory Group, Self-Defi, or any implementation partner hold private keys, initiate transactions, or gain discretionary authority over funds. All actions require signer consensus enforced by SAFE and Zodiac.
